

NIKN

NKN: New Kind of Network

building the world's largest blockchain for network sharing

September 2019 Edition

WHY

Challenges of today's network & blockchain

The Missing Element

STORAGE

PROOF OF STORAGE

e.g. IPFS/Filecoin, Storj

COMPUTE

PROOF OF WORK

e.g. Bitcoin, Ethereum

NETWORK
\$1.4 Trillion
business

PROOF OF RELAY/TRANSMIT

Missing -> NKN

Challenges of today's network

Client-Server model is expensive, complex, and prone to failure & attack

Inefficient Network utilization results in bad or no connection

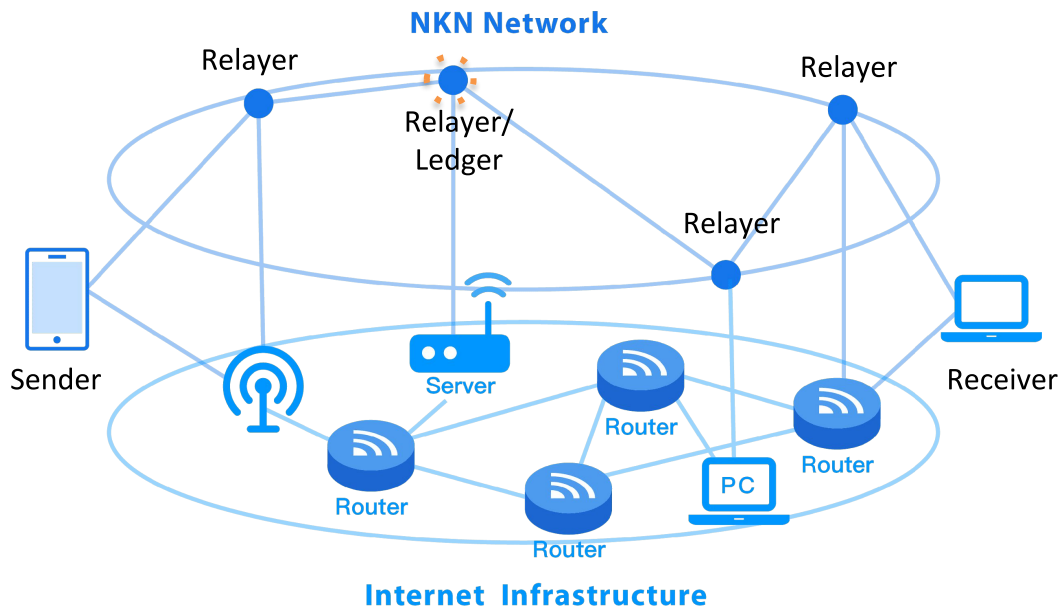

Centralization of blockchain systems diminish trust

WHAT

Revolutionize blockchain and decentralized networking

What is NKN

- NKN is the new kind of P2P network connectivity protocol & ecosystem powered by a novel public blockchain.
- We use economic incentives to motivate Internet users to share network connection and utilize unused bandwidth.
- NKN's open, efficient, and robust networking infrastructure enables application developers to build the decentralized Internet so everyone can enjoy secure, low cost, and universally accessible connectivity.

The NKN Advantages

Millions of nodes

High aggregated throughput

Zero Server

Unique & global ID

Extra security & privacy

Low latency

HOW

Core technology

NKN core technology innovations

Dynamic topology &
routing based on Chord
DHT, overlay on top of
TCP/IP

Signature Chain for
secure and verifiable data
transmission; useful proof
of work

MOCA consensus
algorithm for Millions of
equal nodes

Relay and mining reward
to incentivize sharing and
building the new Internet

ACHIEVEMENTS

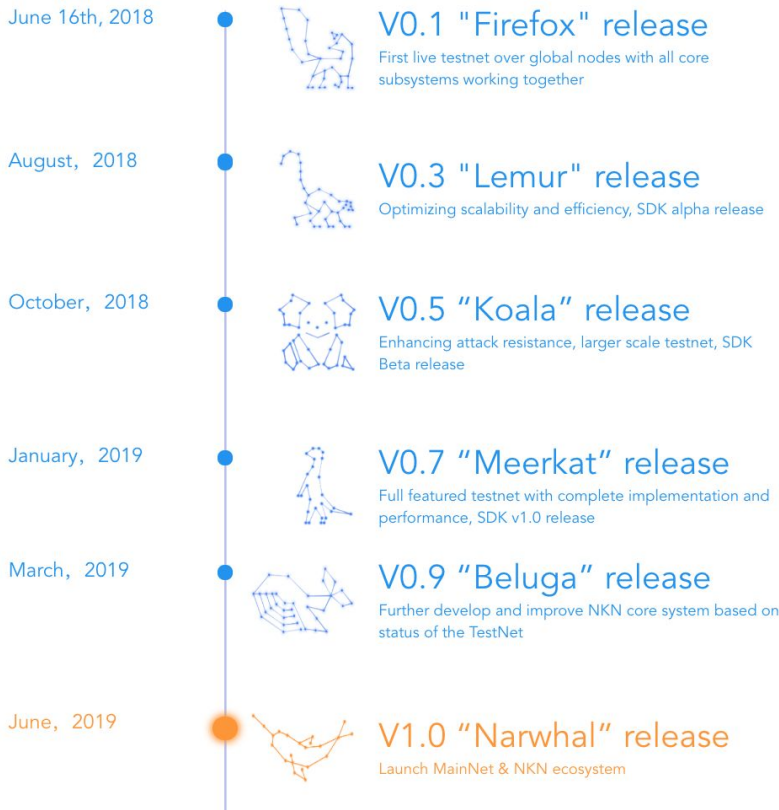

Major milestones accomplished since 2018

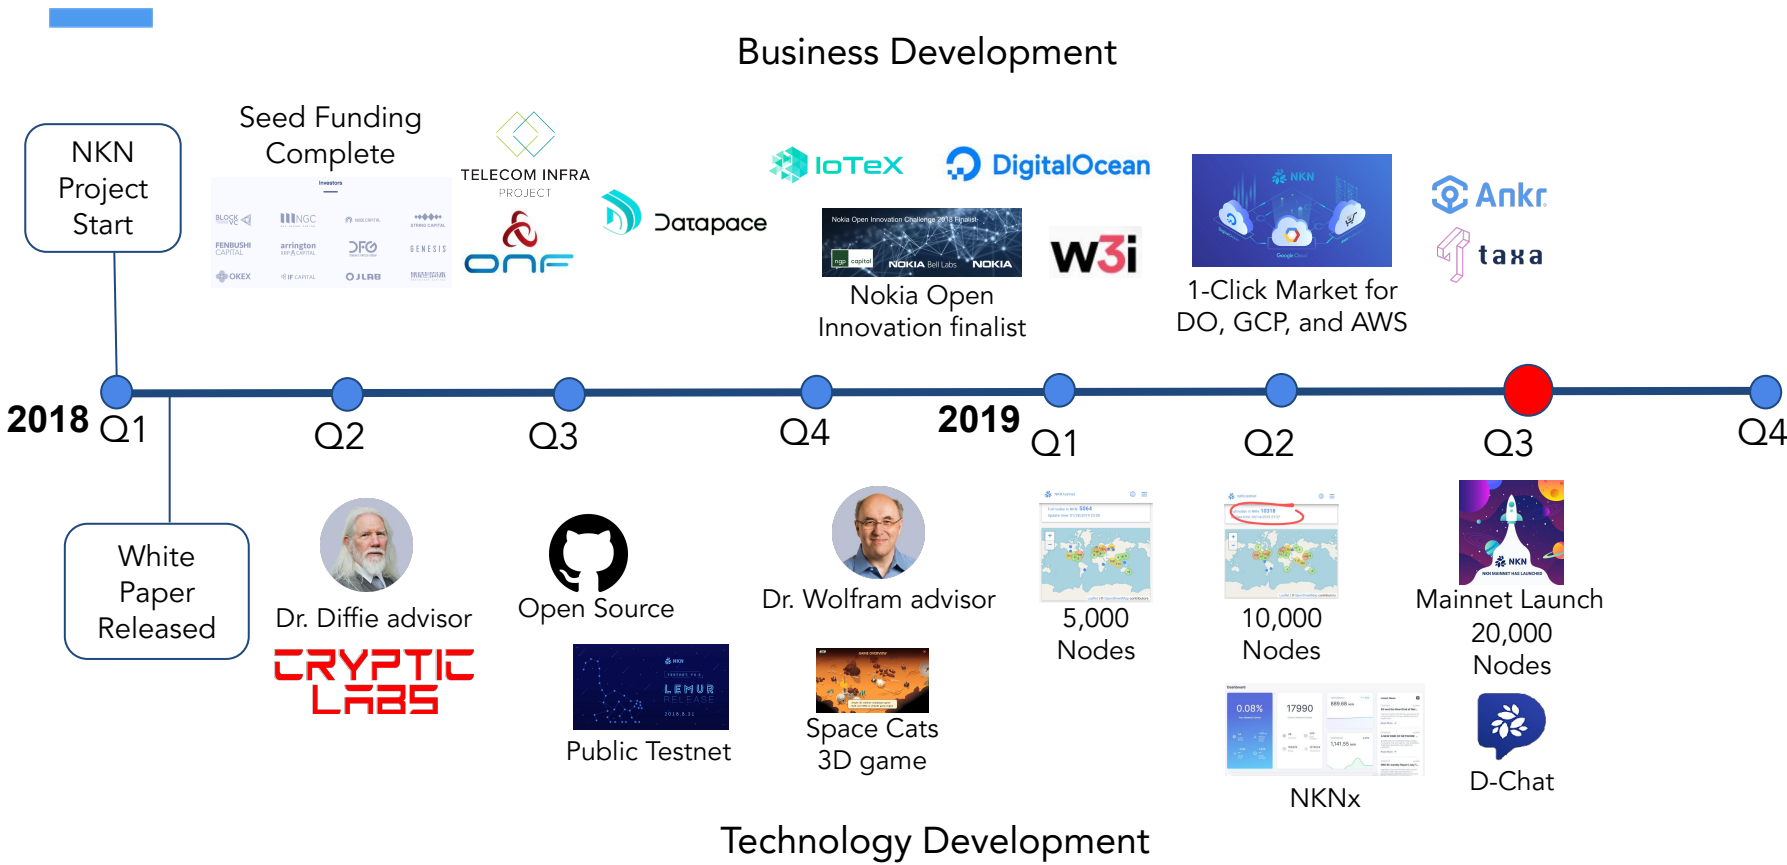

NKN testnet to Mainnet: met/exceeded every milestones

TESTNET

MAINNET

NKN Achievements Timeline (2018 - now)

NKN is building the largest blockchain network, more than Bitcoin

It took NKN 12 months to reach **20,000+** nodes

NKN full nodes all around the world

Full nodes: **21237**

Countries and regions running NKN nodes: 50
([coin as miner](#))

| RANK | COUNTRY | NODES |
|------|----------------|---------------|
| 1 | United States | 9471 (44.68%) |
| 2 | China | 3141 (14.82%) |
| 3 | Netherlands | 1889 (8.91%) |
| 4 | Germany | 1514 (7.14%) |
| 5 | United Kingdom | 1125 (5.31%) |
| 6 | France | 1034 (4.88%) |
| 7 | Singapore | 579 (2.73%) |
| 8 | Canada | 522 (2.46%) |
| 9 | India | 437 (2.06%) |
| 10 | Russia | 283 (1.34%) |
| 11 | Spain | 133 (0.63%) |

NKN is the world's largest blockchain network, bigger than Bitcoin and Ethereum with over 20,000 full consensus nodes.

September, 2019 snapshot
<https://nkn.org>

It took Bitcoin 10 years to reach **9,000+** nodes

BITNODES

Bitnodes is currently being developed to estimate the size of the Bitcoin network by finding all the reachable nodes in the network.

GLOBAL BITCOIN NODES

DISTRIBUTION
Reachable nodes as of Sun Sep 29 2019
19:08:27 GMT-0700 (Pacific Daylight Time).

9065 NODES

24-hour charts >

Top 10 countries with their respective number of reachable nodes are as follow.

| RANK | COUNTRY | NODES |
|------|---------------|---------------|
| 1 | United States | 2312 (25.50%) |
| 2 | Germany | 1876 (20.69%) |
| 3 | France | 582 (6.42%) |
| 4 | Netherlands | 478 (5.27%) |

PRODUCTS

NKN Use Cases & Applications

NKN products and apps overview

Platform (PaaS) products

nCDN: New Kind
of CDN
[More information](#)

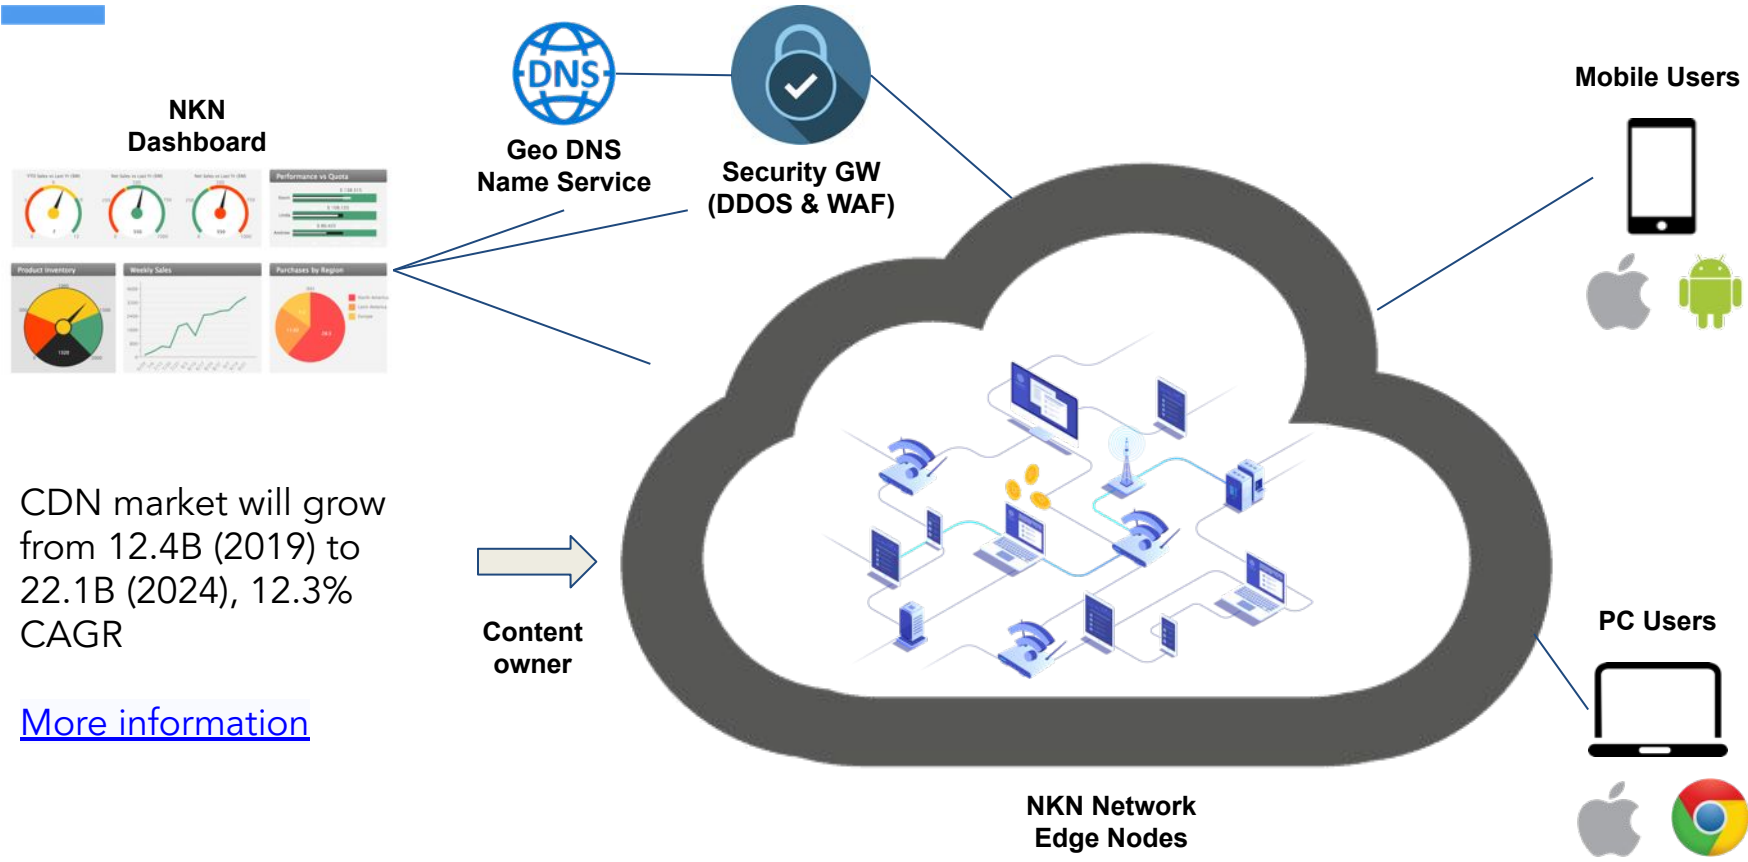

nPubSub:
Decentralized Pub/Sub
Messaging
[More information](#)

TUNA: Open
marketplace for
software services.
[More information](#)

nCDN: New Kind of Content Delivery Network

CDN market will grow from 12.4B (2019) to 22.1B (2024), 12.3% CAGR

[More information](#)

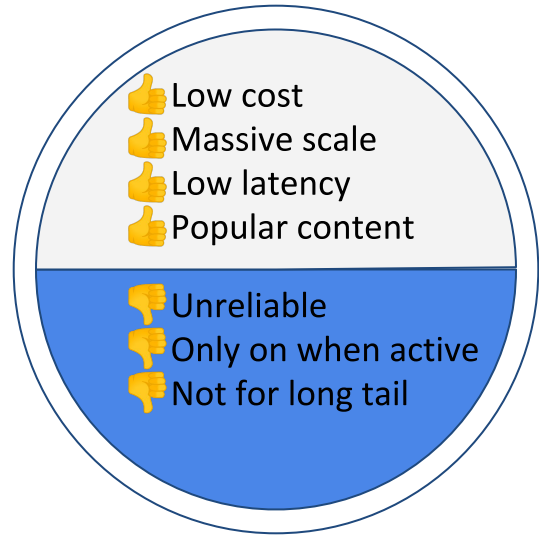

Against Competitions: fast & dependable service at low cost

Traditional CDN
Own Data Center
e.g. Akamai, CloudFlare

nCDN
Crowdsourced servers

P2P CDN
End User Devices
e.g. Peer5, Streamroot

nPubSub: decentralized Pub/Sub messaging

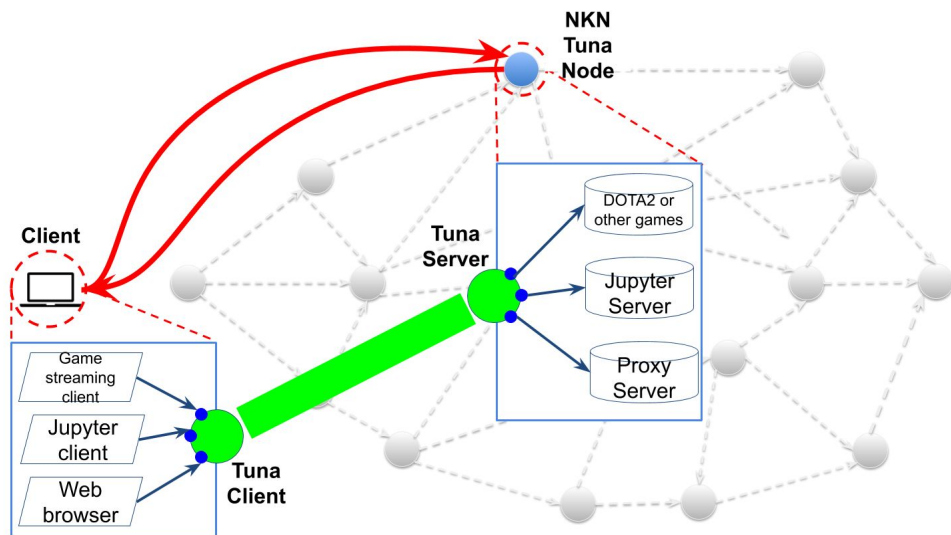

- Gartner: iPaaS is the fastest growing segment of the Application Infrastructure and Middleware (AIM) (Total AIM Market is \$30B)

- Basic building block for most modern applications (chat, IoT, gaming, real-time price)

[More information](#)

- Note: pub/sub (short for publish / subscribe) is a model that decouples message sender (publisher) and receiver (subscribers)

TUNA: Open Market for Software Services

TUNA (Open Market for Software Services)

- Many use cases such as web relay and real-time game streaming (like Google Stadia)
- Use one TUNA tunnel for all these services and more without opening multiple tunnels.
- We leverage the army of NKN nodes to make sure services are readily available all around the globe.
- See more at this brief [TUNA introduction](#)

Applications

D-Chat

Decentralized chat based on nPubSub.
[More information](#)
[Gitlab](#)

NKN Explorer

Blockchain explorer and node check.
[More information](#)

SpaceCats

3D multi-player action game without servers.
[More information](#)
[GitHub](#)

d-FTP: NKN file transfer
[More information](#)

nknX Node and wallet tracker

Miner portal, Node and Wallet tracker.
[More information](#)

Smart Home IoT

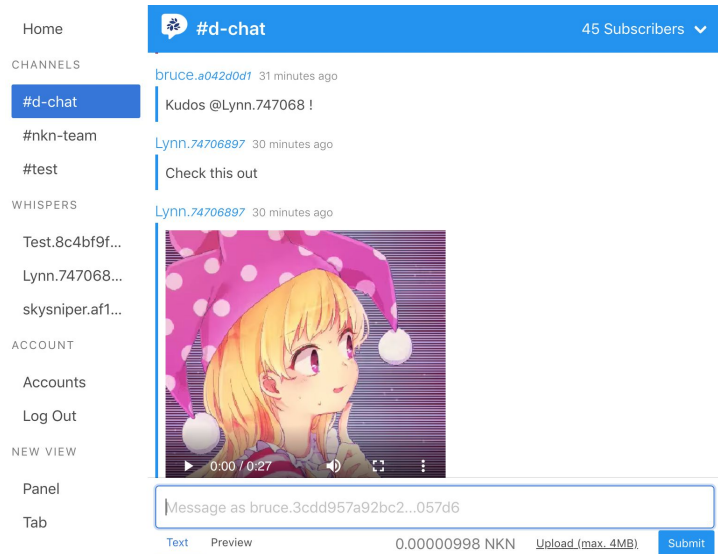

Secure NKN-based e2e communication solution for massive IoT devices.
[More information](#)

nsh: NKN Shell
[More information](#)

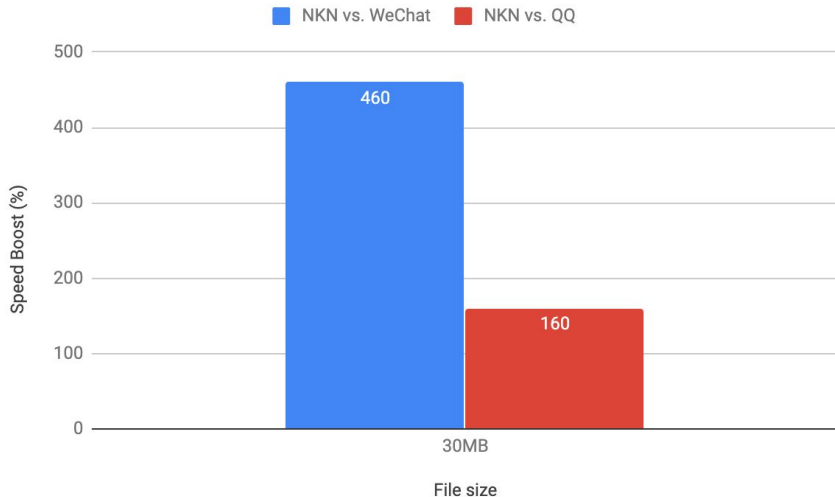

d-Chat: decentralized chat based on nPubSub

d-Chat

- The only truly secure person to person or group messaging service that does not go through any centralized servers.
- Security is enabled both at end to end level as well as hop by hop level.
- It is extremely scalable: messages are delivered off chain and leverage the entire army of NKN nodes.
- More information about [d-chat as well as links to Chrome/Firefox plug-in](#).

d-FTP: high throughput file transfer using NKN client

d-FTP (NKN File Transfer)

- Truly secure and direct user to user large file transfer without any centralized servers (e.g. google drive, gmail, dropbox, etc)
- Faster than popular consumer apps (e.g. WeChat, QQ).
- We use d-FTP to transfer files between Beijing and Silicon Valley and are constantly getting 5x ~ 10x speedup compared to scp.
- See more at our [introduction article](#)

NKN Shell (nsh): more secure and convenient terminal than SSH

Text Preview 0.00000821 NKN Submit
```

nsh (NKN Shell)

- More secure and convenient than SSH
- Do not require the remote server to have public IP address or open ports
- Can easily run one command without setting up the entire SSH session
- We use nsh to manage our own server nodes and for various NKN services including nCDN.
- More: [Hackernoon frontpage article](#)

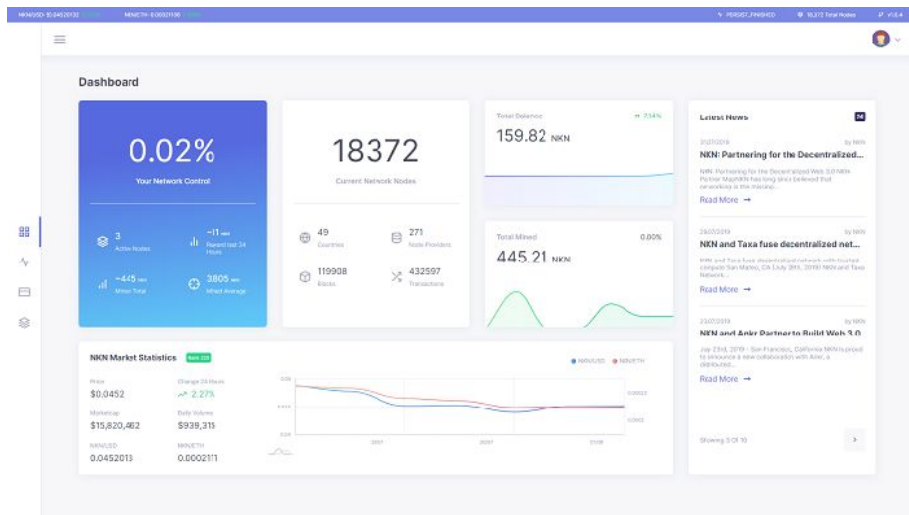

NKN Blockchain Explorer

NKN Blockchain Explorer

- Full featured blockchain explorer: search by block, transaction and address
- Node map of all public NKN nodes globally
- Node checker using node's IP address
- Modern UI design, delightful user experience
- Support 13 international languages
- [More information](#)

nknX Node and Wallet Tracker: Miner Portal

nknX Node and Wallet Tracker: Miner Portal

- NKNx is a node and wallet tracker for NKN blockchain network. It makes managing nodes and wallets easy and convenient.
- Monitor mining nodes' profitability and performance
- New NKNx Fast Deploy automatically create an installation script for your linux machine and installs a fully functional node.
- [More information](#)

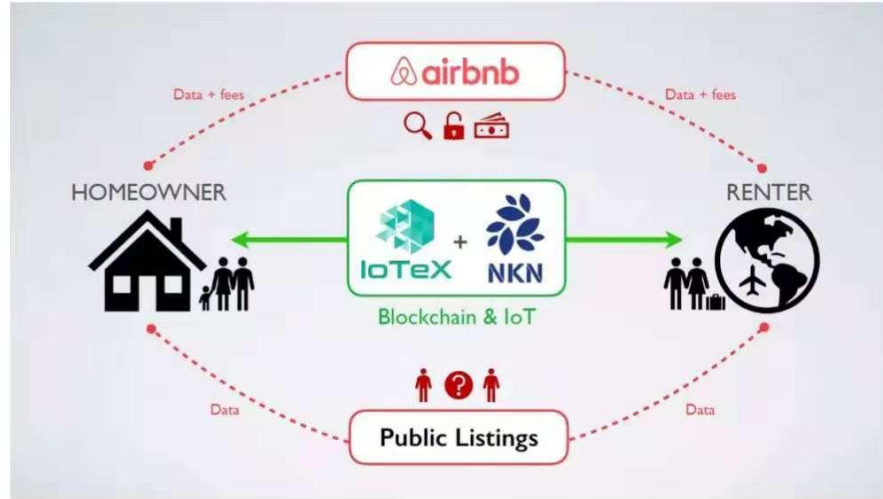

SpaceCats 3D action game

SpaceCats 3D action game

- Built with Unity 3D engine and NKN real-time messaging services
- Decentralized and without any servers, even for multi-player game.
- millisecond level action control
- [More information](#)
- [GitHub](#)

Direct Connect Solution for IoT devices

Direct Connect solution for IoT devices

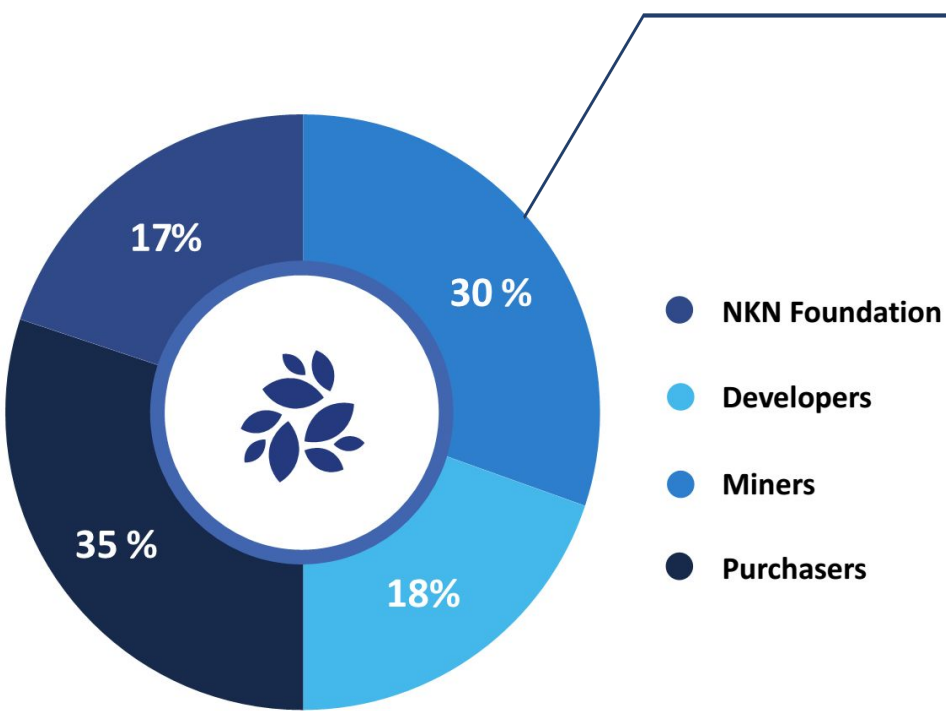

- NKN can provide peer to peer, mesh, ad-hoc, and secure network communication for billions of IoT devices. The data transmission is authenticated, encrypted and verified, in order to support mission critical IoT applications.
- Example: NKN and IoTeX built a joint solution for smart home, using blockchain technology to connect and manage devices like smart thermostat, lights, and door locks.
- [More information](#)

ECOSYSTEM

Economic model, partnership, token metrics

Token metrics

At genesis

- NKN Foundation: strategic investment in building the ecosystem (17%)
- Developers: founding team, community developers (18%)
- Purchasers: purchasers of NKN tokens (35%)

Over 25 years

- Miners: get reward for traffic relay & block maintenance (30%)

NKN Partnership Landscape

Internet companies (e.g. video streaming, IM, social network)

Application Developer

Telco/Carrier

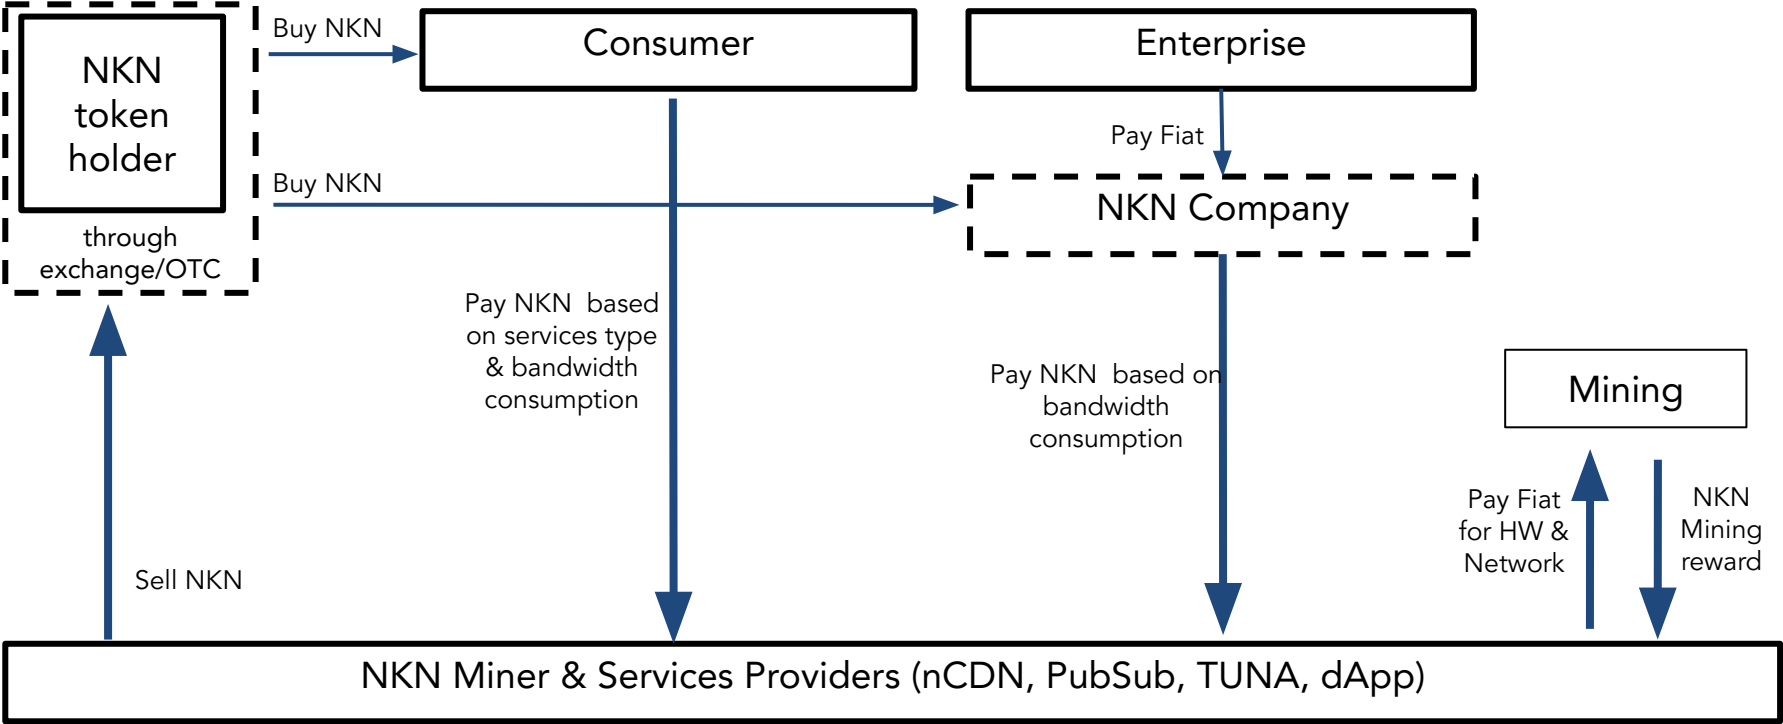

Cloud Service Platform

Blockchain Projects

NKN token utility and circulation model

Listed Exchanges

Strategic partners & alliances

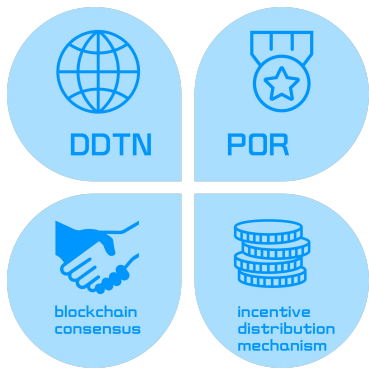

FUTURE

Project aspirations, future roadmaps

NKN roadmap beyond Mainnet: building product success

Blockchain DLT

Scale to millions of nodes
Proof of Relay
Micro payment
Instant settlement

Decentralized Cloud & Edge

True global reachability via NKN
Address; Massively peer to peer data
relay and caching PaaS
Smart scheduling & routing based on
price, performance, utilization

Advanced Research

Self evolution of NKN network
topology and routing
Using Cellular Automata for
massive smart “pod”
computational evolution and
artificial intelligence

ABOUT

Project overview and core team

NKN Project overview

About

- NKN was founded in January 2018 by a group of entrepreneurs and engineers with many years of building networking and blockchain technology in companies like Google, Nokia, QCOM, Baidu, and OnChain.
- The ideal driving this team is that blockchain provides both technical and economic innovations to disrupt the networking business.
- The team has two sites, in Silicon Valley, California and Beijing, China.

Core team and advisors

Yanbo Li

Founder | Strategy &
System Architecture

ex-OnChain co-founder

Bruce Li

Co-Founder | Strategy &
Operations

ex-Googler & Nokia

Dr. Yilun Zhang

Co-Founder | Core
Researcher & Developer

Ph.D. Physics, UCSD

Allen Dixon

Business Development
& Compliance

ex-Nokia

Dr. Whitfield Diffie

NKN Technical Advisor
2015 Turing Award winner
co-inventor of public key
cryptography

Dr. Stephen Wolfram

NKN Technical Advisor
Author of New Kind of Science
Chief designer of Mathematica
and the Wolfram

Building world's largest blockchain for network sharing
